To Whom It May Concern:

As the manufacturer of TECAMAX® SRP stock shapes, Ensinger can attest that Plastic Engineering, Inc., has the experience and capabilities to successfully machine parts from TECAMAX® SRP shapes. Since the success of each project depends on the specific design and tolerances required, Ensinger cannot guarantee the success of the machining trials. We can assure you that Plastic Engineering, Inc., has both state of the art equipment and experience machining TECAMAX® SRP and that Ensinger will work closely with them to deliver acceptable parts on a timely basis.

Sincerely,

Lawrence G. Resavage  
Vice President
