Mr. Trent Powell

Plastic Engineering
3104 South 52nd Street
Tempe, AZ 85282

Plastics Engineering is a supplier of precision machined parts for Jansen's Aircraft Systems Controls, Inc. JASC engineers and manufactures various high temperature and critical reliability valves for the Gas Turbine Industry.

In addition to providing accurate cost effective machined detail parts to support our production, Plastic Engineering is always available for consultation on proper and alternative material selections. Their background in plastics and machining is a valuable asset when JASC is involved in prototype and new product development. Plastics Engineering strives to produce the same accurate high quality parts for one off prototypes as they do for thousands of units serial production.

The staff at Plastics Engineering is knowledgeable and accessible, always striving to fulfill JASC's various demands.

JASC looks forward to the ongoing business relationship with Plastics Engineering and highly recommends them as a quality organization and consistent supplier.

Respectfully

Kevin Deutscher
